

All Products API

This will contain all available products  
{  
  "id": 0  
  "name": "product name",  
  "image": "product image",  
  "price": 0.00,  
  "category": "product category"  
}

Store to All Products Endpoints

GET: '/api/allproducts?category=category'  
(gets all products of a certain category,  
and adds them to StoreView)

Cart API

This will be all products that are in the  
current cart  
{  
  "id": 0,  
  "name": "product name",  
  "image": "product image",  
  "price": 0.00,  
  "category": "product category"  
}

Store to Cart Endpoints

GET: '/api/cart' (gets all products in cart)  
PUT: '/api/cart/:id' (comes with new  
quantity in body. Updates quantity of  
product on cart)  
POST: '/api/cart/' (adds product as a body  
from All Products to Cart)  
DELETE: '/api/cart/:id' (removes item from  
cart)
